

Thousands of customers worldwide trust OutSystems, the number one low-code platform for rapid application development. OutSystems is ranked as a leader in Low-Code Application Development Platforms (Gartner and Forrester). Engineers with an obsessive attention to detail crafted every aspect of the platform to help organizations build enterprise-grade apps incredibly fast and transform their business faster.

OutSystems is the only solution that combines the power of low-code development with advanced mobile capabilities, enabling visual development of entire application portfolios that easily integrate with existing systems.

Rapid productivity: Create your apps and integrate in weeks, not months.

Speed and code: Improve efficiency and accelerate speed by developing in a visual environment while retaining complete flexibility to integrate custom code.

Integrate with everything: Connect with popular cloud services & database systems using pre-built connectors and SOAP & REST integration without coding. Model business logic and workflow visually to orchestrate data across any number of different platforms to support your business needs.

Multi-channel development: Develop an application that can run on any device or platform. Delivery time and risks are significantly reduced with error-free, automated deployments.

Open platform: Protect your investment in large back-end systems by integrating with existing systems of record and data sources.

Enterprise-grade platform: Build and manage very large portfolios of applications created by teams of developers just as easily and quickly as a single app.

Exasol database connector for OutSystems

Exasol is the world's fastest database for analytics and data warehousing (TPC-H benchmark). Its high-performance in-memory analytics database gives organizations the power to transform how they work with data, on-premises, in the cloud or both and turn it into value faster, easier and more cost effectively than ever before.

Ultra fast - Enterprise scale

Accelerate and endlessly scale your data store, reporting and real-time in-database analytics – and get unrivalled performance.

Agility and business ease of use

Store massive data volumes in a highly flexible and adjustable data model - Complete freedom to adapt and change.

Self-optimizing and tuning-free

Intelligent algorithms monitor usage and perform self-tuning tasks, which optimize performance and minimize administration overhead.

Operationalize Data Science

Unite the relational SQL world with any modern data science language (R, Python, Java, LUA) and run advanced analytics on raw data directly in your database, enabling you to operationalize Artificial Intelligence and Machine Learning at speed.

Significantly reduced TCO

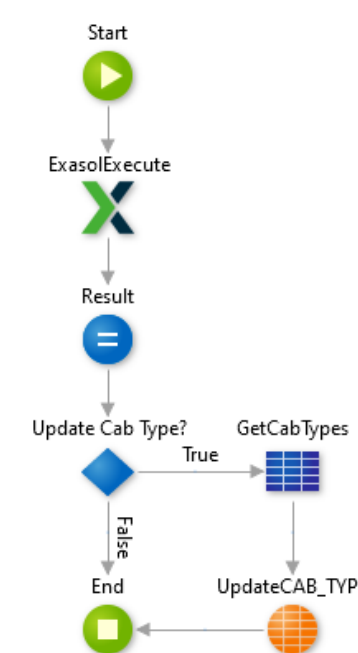

Resource-efficient and effortless database administration – really cost effective in Infrastructure, Performance & Administration

Using Exasol with OutSystems enables companies to speed up their digital automation strategy and quickly implement low-code data driven business applications using Analytics, Artificial Intelligence, Predictive Modelling and Machine Learning techniques.

The Exasol connector for OutSystems has been developed from the vision that both platforms perfectly fit our rapid-development, low-maintenance and high-performance ideology.

- Connect the on-premise OutSystems platform to the Exasol database natively (like current SQLServer, Oracle, iDB2 and MySQL).
- Add Exasol tables and views as external entities using Integration Studio.
- All typical OutSystems Entity (CRUD) actions, Aggregates and Advanced SQL are natively available.
- Use the embedded ExasolExecute extension for exceptional or custom queries and execute direct database commands (all DQL, DDL, DML, DCL available).
- Component is available for download in OutSystems Forge & Azure DevOps
- Clear instructions and (trial)license available via our website novioq.com

OutSystems & Exasol touchpoints

	OutSystems low-code platform	Exasol database
Unbeatable speed	●	●
Integrate with everything	●	●
Store and analyse massive amounts of data		●
Great UX by default	●	
Agility without constraints; complete freedom to adapt and change	●	●
Rapid & intelligent productivity	●	●
Built-in security	●	●
Enterprise grade and scalability	●	●
Flexible and unbreakable deployment	●	●
Fully SQL-compliant with native SQL database operations	●	●

NovioQ is your excelling partner when it comes to implementing fast, solid, scalable and maintainable low-code applications and business intelligence & analytics technologies in enterprise environments.

With our decades of experience, we are well recognized for our knowledge and executing capabilities to create governance and operate in international and highly complex corporate environments.

We enjoy doing complex projects, especially when it involves well designed architecture and integrations with your enterprise cloud solutions and back-end systems like SAP.

Interested in making huge amounts of low level data readily available?

Reach out to us by calling +31 (0) 24 669 00 29 or send us a message at info@novioq.com
